SIMPLE KUBOTA CHECKS SERIES

Engine Oil

- Check your engine oil before starting your Kubota machine. Park the machine on a level surface and allow it to stand for 5 minutes before checking. Remove the dipstick, wipe clean and reinsert into the engine. Remove the dipstick again and check. The oil level should be between the upper and lower marks.
- Add the correct engine oil if required until oil is between the marks.
- At the same time, check there are no fluid leaks around your engine. Contact your local Kubota dealer if any fluid leaks are found.
- Ensure Engine oil is changed frequently, either by hour count, as per your Kubota operators manually, or annually for low hour users.
- Dirt and carbon can build up in your engine oil as the result of internal combustion. Regular engine oil changes ensure these deposits are removed, allowing a more efficient running of the engine, along with improved lubrication and cooling of the combustion chambers.

Maximise your Uptime.

Minimise your downtime with 5 years Kubota Care warranty as standard

All new Kubota excavators come 5 years/2000 hours* Kubota Care warranty as standard, offering exceptionally good value and peace of mind - testament to Kubota's unparalleled engineering excellence and reliability.

Upgrade your warranty - for the hours you work The warranty hours covered on your Kubota can be further extended at the time of purchase to an optional 3000, 4000 or 5000 hours - providing you with a higher level of protection beyond the standard 2000 hours warranty obligations – again up to 5 years.

Simply decide and pay for the additional service hours usage, at the time of your machine purchase.

KEY BENEFITS

- No excess charge for warranty claims.
- Expert service provided by expert Kubota-trained Technicians from your local Kubota dealer
- Only genuine Kubota parts fitted to ensure optimum performance.
- Enhanced resale value- warranty is fully transferable to new owner

*Terms and conditions apply. Machine to be serviced by an authorised Kubota dealer

GEAR FOR KUBOTA OPERATORS

FIND OUT ABOUT KUBOTA'S RANGE OF MERCHANDISE FROM YOUR LOCAL DEALER

“What sets Kubota apart is the length of warranty and the Kubota Care package.”

Matt Trevail of RJ Trevail, based in Cornwall, use Kubota excavators for their plant hire and groundworks business. Kubota has helped Trevail's grow not only through offering reliable machinery for its groundworks hire business but also thanks to the Kubota Care warranty package which has helped reduce labour costs with service and maintenance now provided by skilled engineers from the local Kubota dealer as part of the Kubota care package.

Get dig ready for winter!

Making sure your Kubota is ready for winter is crucial for protecting your investment and maximising it's performance.

- Batteries:** If your compact excavator is not going to be used for a long period of time, you need to properly store the battery away from freezing temperatures. Batteries can lose up to 35 percent of their power at 1°C. To prevent the battery from draining in the cold temperatures, test its voltage before storing it inside.
- Track Tension:** Winter can be tough on rubber tracks, so ensure these are kept properly adjusted to maximise longevity and minimize wear on the track and its components. Always refer to the operator's manual and check track sag measurements on a regular basis to ensure the track tension is correct.
- Grease points:** Grease all pins and bushes daily, making sure to have a good grease coverage for winter. Your local dealer stocks a wide range of grease including Kubota multi-purpose grease and Panolin environmentally friendly grease.
- Gearboxes:** In winter gearboxes may be covered in mud or snow, with the fill and drain plugs not visible but you must ensure oil changes are continued at approximately 1,000-hour intervals
- Fuel and additives:** You can improve your engine start-up in cold weather by using an anti-gelling additive in your diesel fuel. Change the fuel filters and fuel separator filters to be sure no moisture has been retained by the filters that could cause problems in the future.
- Oils and coolants:** Change the oils in your construction equipment before and after the winter months. See Kubota simple check in this issue for engine oils – and ensure you use genuine Kubota oils and coolants for maximum performance and protection.
